

## ABSTRACT

1 An electrical connector including electrical contacts, a  
2 first housing member and a second housing member. The  
3 first housing member has contact receiving areas. The  
4 electrical contacts are located in the contact receiving  
5 areas. The second housing member is connected to the  
6 first housing member and comprises a mating electrical  
7 connector latch comprising a latch surface at a front end  
8 of the latch and a lever arm extending rearward from the  
9 front end of the latch. The lever arm is adapted to  
10 pivot on top of a portion of the second housing member.
